TRY to do this COMPLETELY from MEMORY.
If you cannot - then repeat the homework LATER *only using Memory.*

1. Use the exact prompts and legends specified by Mentor.
   Be CAREFUL with spacing and capitalization.

2. Variable names are NOT arbitrary - each variable will be required to be a particular English noun - look at the hints in the problem.
   DO NOT capitalize your variable names.
   Some trial and error may be necessary.

3. With ONE exception avoid unnecessary blanks.
4. The ONE exception is the + sign in the legend+output command. Put a blank on each side of the + sign. For example:

   ```java
   out.println("answer=" + answer);
   ```

5. ONE command per Line.
