MyWeb at ECU

In the summer of 2021 accounts on MyWeb were moved to a new secure server. IMHO, this was done in a way that creates little if any difficulty for faculty who use this web server. Here is my discussion with Matt (a great guy) in ITCS about this.

Karl,

I have moved your content from the psyc folder on the basic web space to your new folder on the secure web space. The old links should properly redirect to the new location.

For example, here's one link from your old space: http://core.ecu.edu/psyc/wuenschk/klw.htm. If you click on that link and look in the browser's address bar you'll notice it redirected to the new website without the 'psyc' in the URL: https://core.ecu.edu/wuenschk/klw.htm. You will also notice it's using the secure protocol (https).

Note: some browsers don't show the protocol, but it will show a 'lock' icon beside the URL.

To access and edit your files you may connect via PiratePanel, network path, or FTP. That info is shown below and also available at
https://ecu.teamdynamix.com/TDClient/1409/Portal/KB/ArticleDet?ID=67654

PiratePanel

Login at https://piratepanel.ecu.edu/

Network path (you will need to be on campus or connected to VPN)

- macOS - smb://myweb/secure/wuenschk
- Windows - \\myweb\secure\wuenschk\

FTP settings – also must be logged in to the VPN to FTP I find FTP a lot easier than mapping a drive, since a mapped drive must be recreated for each VPN session.

host: ftpmywebsecure.ecu.edu
port: 2021
encryption: Require explicit FTP over TLS
user: intra\wuenschk

Once you have enabled VPN on your PC all you need do to connect is Start, Cisco, Cisco Secure Connect Mobility Client. Each time a verification code will be sent to your cell phone.
https://ecu.teamdynamix.com/TDClient/1409/Portal/KB/ArticleDet?ID=67337

Let me know if you have any issues. Thank you!

Matt

PS – yes, go ahead and make the move.

Cheers,

Karl,

Thanks for the quick reply. No, access to view the website will not change. The move to the secure space simply means that we will be enforcing the secure protocol (https) for all websites.
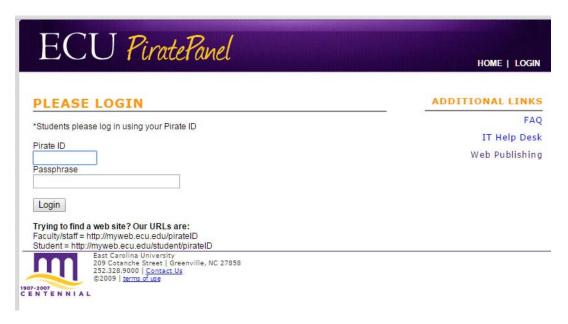

And we will setup a redirect so the old links will properly redirect to the new link. For example, once the content is moved the link in your signature file: http://core.ecu.edu/psyc/wuenschk/klw.htm will redirect visitors to https://core.ecu.edu/wuenschk/klw.htm. Notice the new link will be https and no longer includes "psyc".

There is no downtime during this transition either. Let me know when you're ready and I'll move the content and provide you with the correct link to access your content in your new secure space.
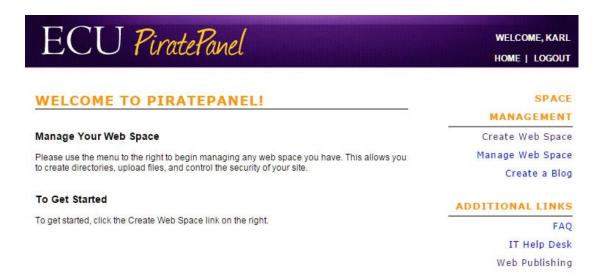

Matt

In the Summer of 2015, accounts on the core server were migrated to a server known as MyWeb. The URLs for items like http://core.ecu.edu/psyc/wuenschk/Help/Web-Help/Web.htm continued to point to the correct server.
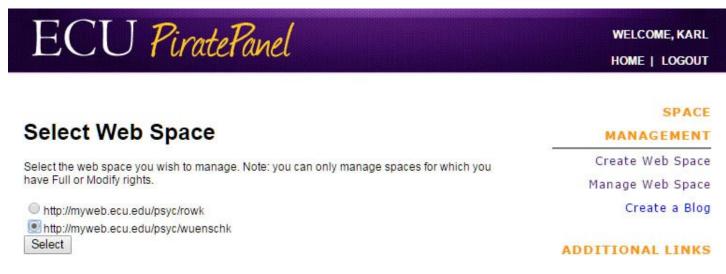

Folks at ECU who want to create a web presence on MyWeb need first request an account on MyWeb. Start by going to https://piratepanel.ecu.edu/. You will see the screen shown below.

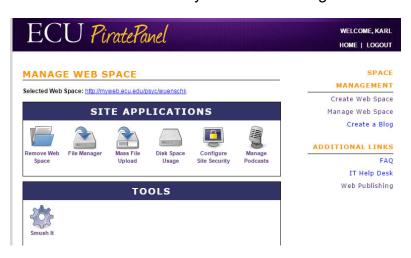

Provide your Pirate ID and password. You then advance to this screen:

Click on "Create Web Space" to create an account. If you already have an account, you can click on "Manage Web Space to advance to the screen shown below.

Select the account you wish to manage and then click Select. You advance to the next page.

From the File Manager you can upload, download, and delete files, etc.

FILE MANAGER

Web Space: http://myweb.ecu.edu/psyc/wuenschk

Use the buttons below to control the files and directories in your webspace. You can also right-click on files and directories below to get additional options.

PiratePanel File Manager
